Language, Culture, Civilization, Storytelling **ARTICLE HISTORY** Date of Publication:30-10-2025 **Conference Organizer(s)** University of Lahore, Sargodha Campus, Pakistan & Research Consultancy on Social & Management Development	The biological systems of living beings on Earth organize life. Animals' existence is closely tied to their natural environment, and a self-made environment can prove dangerous for them. Plants grow best in a suitable environment, where factors like climate, the Earth's surface, and weather determine the types of plants that can thrive. Unlike other living beings, humans are independent of their groups and social structures because they have the ability to create their own groups and self-made or artificial environments. Humanity formulates political, economic, social, scientific, and technical systems. With an analytical mind, humans can distinguish and adapt to the principles of situations, events, accidents, and experiences. Culture embodies the values, ideals, beliefs, and traditions shaped by historical and social inheritance, while civilization represents the material and technological advancements rooted in spatiality. Without language, much of a culture's richness might be lost over time. Languages serve as mediums for artistic and creative expression, such as poetry, music, and storytelling, which are integral to cultural preservation and evolution.
